

```
API_AUTH_TOKEN = "your_token"

# Initialize Groww API
groww = GrowwAPI(API_AUTH_TOKEN)

# Select an instrument (example: Reliance Industries)
selected = groww.get_instrument_by_groww_symbol("NSE-RELIANCE")

# Fetch latest price data for the selected instrument
ltp_response = groww.get_ltp(
    exchange_trading_symbols="NSE_" + selected['trading_symbol'],
    segment=selected['segment'],
)

print("Live Data:", ltp_response)
```

Output

```
# The latest price data for the selected instrument is printed
{"ltp" : 149.5}
```

Instrument CSV Columns

The CSV contains the following columns (separated by commas):

Name	Type	Description
exchange	string	The Exchange where the instrument is traded
exchange_token	string	The unique token assigned to the instrument by the exchange
trading_symbol	string	The trading symbol of the instrument to place orders with
groww_symbol	string	The symbol used by Groww to identify the instrument
name	string	The name of the instrument
instrument_type	string	The type of the instrument
segment	string	Segment of the instrument such as CASH, FNO etc.
series	string	The series of the instrument (e.g., EQ, A, B, etc.)

buy_allowed	boolean	Whether buying the instrument is allowed
sell_allowed	boolean	Whether selling the instrument is allowed

Advanced uses

You can also download the csv file and use it for your own purposes. Here is an example of how you can load the csv file and use it in your code.

```
from growwapi import GrowwAPI
import pandas as pd
# Load the CSV file
instrument_df = pd.read_csv(groww.INSTRUMENT_CSV_URL) # groww.INSTRUMENT_CSV_URL points to the url to download

# OR you can also do this
instrument_df = groww._load_instruments()
print(instrument_df.head())
```
