

Introduction

Welcome to the Groww Trading API! Our APIs enable you to build and automate trading strategies with seamless access to real-time market data, order placement, portfolio management, and more. Whether you're an experienced algo trader or just starting with automation, Groww's API is designed to be simple, powerful, and developer-friendly.

This SDK wraps our REST-like APIs into easy-to-use Python methods, allowing you to focus on building your trading applications without worrying about the underlying API implementation details.

With the Groww SDK, you can easily execute and modify orders in real time, manage your portfolio, access live market data, and more — all through a clean and intuitive Python interface.

Key Features

- Trade with Ease: Place, modify, and cancel orders across Equity, F&O, and Commodities.
- Real-time Market Data: Fetch live market prices, historical data, and order book depth.
- Secure Authentication: Use industry-standard OAuth 2.0 for seamless and secure access.
- Comprehensive SDK: Get started quickly with our Python SDK.
- WebSockets for Streaming: Subscribe to real-time market feeds and order updates.
- Multi-Asset Trading: Trade across NSE, BSE, and MCX exchanges.

Getting started:

Step 1: Prerequisites

Trading on Groww using Groww APIs requires:

- A Groww account.
- Basic knowledge of Python and REST APIs.
- A development environment with Python 3.9+ installed.
- Having an active Trading API Subscription. You can purchase a subscription from this [page](#).

Note: Groww Trading APIs support equity (CASH), derivatives (FNO), and commodities (COMMODITY) trading. You can trade across NSE, BSE, and MCX exchanges."

Step 2: Install the Python SDK

You can install the Python SDK by running this command on your terminal/command prompt.

```
pip install growapi
```

Step 3: Authentication

There are two ways you can interact with GrowwAPI:

1st Approach: API Key and Secret Flow

(Uses API Key and Secret — Requires daily approval on Groww Cloud Api Keys Page)

Make sure you have the latest SDK version for this. You can upgrade your Python SDK by running this command on your terminal/command prompt.

```
pip install --upgrade growlapi
```

- Go to the [Groww Cloud API Keys Page](#).
- Log in to your Groww account.
- Click on 'Generate API key'.
- Enter the name for the key and click Continue.
- Copy API Key and Secret. You can manage all your keys from the same page.

You can use the generated 'API key & secret' to log in via the Python SDK in the following way:

```
from growapi import GrowAPI
import pyotp

api_key = "YOUR_API_KEY"
secret = "YOUR_API_SECRET"

access_token = GrowAPI.get_access_token(api_key=api_key, secret=secret)
# Use access_token to initiate GrowAPI
grow = GrowAPI(access_token)
```

2nd Approach: TOTP Flow

(Uses TOTP token and TOTP QR code — No Expiry)

Make sure you have the latest SDK version for this. You can upgrade your Python SDK by running this command on your terminal/command prompt.

```
pip install --upgrade growapi
```

- Go to the [Groww Cloud API Keys Page](#).
- Log in to your Groww account.
- Click on 'Generate TOTP token' which is under the dropdown to **Generate API key** button.
- Enter the name for the key and click Continue.
- Copy the TOTP token and Secret or scan the QR via a third party authenticator app.
- You can manage all your keys from the same page.

To use the TOTP flow, you have to install the `pyotp` library. You can do that by running this command on your terminal/command prompt.

```
pip install pyotp
```

```
from growapi import GrowAPI
import pyotp

api_key = "YOUR_TOTP_TOKEN"

# totp can be obtained using the authenticator app or can be generated like this
```

```
totp_gen = pyotp.TOTP('YOUR_TOTP_SECRET')
totp = totp_gen.now()

access_token = GrowwAPI.get_access_token(api_key=api_key, totp=totp)
# Use access_token to initiate GrowwAPI
groww = GrowwAPI(access_token)
```

Step 4: Place your First Order

Use this sample code to place an order.

```
from growwapi import GrowwAPI

# Groww API Credentials (Replace with your actual credentials)
API_AUTH_TOKEN = "your_token" # Access token generated using step 3.,

# Initialize Groww API
groww = GrowwAPI(API_AUTH_TOKEN)

place_order_response = groww.place_order(
    trading_symbol="NIPRO",
    quantity=1,
    validity=groww.VALIDITY_DAY,
    exchange=groww.EXCHANGE_NSE,
    segment=groww.SEGMENT_CASH,
    product=groww.PRODUCT_CNC,
    order_type=groww.ORDER_TYPE_LIMIT,
    transaction_type=groww.TRANSACTION_TYPE_BUY,
    price=250, # Optional: Price of the stock (for Limit orders)
    trigger_price=245, # Optional: Trigger price (if applicable)
    order_reference_id="Ab-654321234-1628190" # Optional: User provided 8 to 28 length alphanumeric reference
)
print(place_order_response)
```

Rate Limits

The rate limits are applied at the type level, not on individual APIs. This means that all APIs grouped under a type (e.g. Orders, Live Data, Non Trading) share the same limit. If the limit for one API within a type is exhausted, all other APIs in that type will also be rate-limited until the limit window resets.

Type	Requests	Limit (Per second)	Limit (Per minute)
Orders	Create, Modify and Cancel Order	10	250
Live Data	Market Quote, LTP, OHLC	10	300
Non Trading	Order Status, Order list, Trade list, Positions, Holdings, Margin	20	500

For Live feed, upto 1000 subscriptions are allowed at a time.
