Response Schema

Name	Type	Description
trading_symbol	string	Trading symbol of the instrument
segment	string	<u>Segment</u> of the instrument such as CASH, FNO etc.
credit_quantity	int	Quantity of credited instruments
credit_price	int	Average price in rupees of credited instruments
debit_quantity	int	Quantity of debited instruments
debit_price	int	Average price in rupees of debited instruments
carry_forward_credit_quantity	int	Quantity of carry forward credited instruments
carry_forward_credit_price	int	Average price in rupees of carry forward credited instruments
carry_forward_debit_quantity	int	Quantity of carry forward debited instruments
carry_forward_debit_price	int	Average price in rupees of carry forward debited instruments
exchange	string	<u>Stock exchange</u>
symbol_isin	string	ISIN (International Securities Identification number) of the symbol
quantity	int	Net quantity of instruments
product	string	<u>Product type</u>
net_carry_forward_quantity	int	Net carry forward quantity of instruments
net_price	int	Net average price in rupees of instruments
net_carry_forward_price	int	Net average price in rupees of carry forward instruments
realised_pnl	int	Realised profit and loss in rupees

Get Position for Symbol

Retrieve detailed position information for a specific symbol using this `get_position_for_trading_symbol`.

Python SDK Usage

```
from growapi import GrowAPI

# Grow API Credentials (Replace with your actual credentials)
API_AUTH_TOKEN = "your-token"

# Initialize Grow API
grow = GrowAPI(API_AUTH_TOKEN)

trading_symbol_position_response = grow.get_position_for_trading_symbol(trading_symbol="RELIANCE", segment="g")
print(trading_symbol_position_response)
```

Request Schema

Name	Type	Description
trading_symbol *	string	Trading symbol of the instrument.
segment *	string	<u>Segment</u> of the instrument such as CASH, FNO etc.

* required parameter

Response Payload

All prices in rupees

```
